SOLECTRIA'S REMOTE ACCESS PORTAL

A COST-SAVING AND PRODUCTIVITY-BOOSTING TOOL

The SOLECTRIA® Remote Access Portal™ (RAP) is a web-based tool that provides real-time access to, and control of, all Solectria XGI 1500 inverters.

With the RAP, users can work remotely to change settings, perform diagnostics, update firmware, and restart the XGI 1500 inverters – avoiding site visits and providing significant overall savings. By reducing system downtime, the Remote Access Portal can simplify operations, increase productivity, boost team efficiency, and improve the bottom line.

WHAT'S THE SAVINGS?

To illustrate how the RAP can benefit a company, two hypothetical small companies have been analyzed to evaluate the potential savings:

- Company A is a long-term asset holder with a small, in-house O&M team;
- Company B is an O&M service provider for third-party sites.

Both companies realize significant savings in their electrician's time and travel expenses, assuming that the use of the Remote Access. Portal saves just 10% of overall troubleshooting truck rolls.

Assume RAP saves 10% of Truck Rolls for 10 electricians :2 per truck

Company A:
Long Term Asset Owner

2.0% could equate to
$15k+ a year savings

Other Projects 30%

Truck Rolls 20%
RAP SAVED 2%

Company B:
O&M Company

3.5% could equate to
$27k+ a year savings

Maintenance 65%

Troubleshooting Truck Rolls 35%
RAP SAVED 3.5%
